IQ 200

Hardware Specifications

USB Flash Drive Support!

Infinisource's new entry level unit is perfect for small to mid-sized companies looking to perform primarily time and attendance only monitoring. It includes a **USB port** that allows for easy data transfer without Internet, modem, or cellular connectivity. Simply insert a USB Flash drive and quickly download time punch data that can then be uploaded later to TimeForce II.

The IQ200 from Infinisource is an ideal entry level time clock for small to mid size TimeForce II systems. It's versatile design delivers sophisticated capabilities while maintaining ease of use.

Employee punches are sent to TimeForce II via On Demand, a robust communications program that provides real-time operations as well as remote time clock configuration.

For customers without ethernet connections at the desired mounting location, or for situations when your network is down, the IQ200 can store employee punches on a USB flash drive for transport back to TimeForce.

Employees can punch In and Out for work as well as on / off from meals and breaks.

The IQ200 is designed and manufactured by Infinisource in the United States. We go this extra step to ensure the highest performing and reliable products for our customers.
